Lead-based paint isn't the only cause of lead poisoning!

From lunch boxes to action figures, toy trucks to bath tub toys, plastic products containing lead as a coloring agent or stabilizer, can create a hazard to your family. In the US alone, over 18 million toys, jewelry items and accessories from key chains to water bottles, were recalled for reports of excessive lead.

Experienced and Certified.

More Lead Facts You Should Know...

- Symptoms of lead poisoning include: Learning difficulties, Development delay, Irritability, Abdominal pain, Vomiting and Hearing Loss.
- Even children who seem healthy can have high levels of lead in their bodies.
- You can get lead in your body by breathing or swallowing lead dust, or by eating soil or paint chips containing lead.
- Renovating your house can also increase the danger to your family.
- Lead is also harmful for adults.
- Children's growing bodies are more at risk of absorbing lead.
- If not detected early, children with high levels of lead in their bodies can suffer from serious health issues.
- People can get lead in their body if they put their hands or other objects covered with lead dust in their mouths, eat paint chips or soil that contains lead, or breathe in lead dust, especially during renovations that disturb painted surfaces.

Did you know?

- The glazes in some ceramic mugs, pitchers and dinnerware can contain lead.
- There is no acceptable level of lead for a child.
- One square inch of lead paint can poison 500 kids.
- Children under 6 absorb 70% of lead ingested.
- Homes built prior to 1978 have a strong likelihood of potential lead hazards.
